

Large Capacity Power Supply for Industry

Output voltage[V]

- Support in eco product lines in power electronics
- Respond to a high voltage (3300V~6600V) grid power
- Instantaneous waveform control by utilizing IGBT technology in large capacity switching power supplies
- Produced refining power supplies (ex: SVG, I-AVR, Active filter)

- Full digital, high power factor converter control unit
- Large scale thyristor rectifiers with active filters
- Refined equipment for control panel
- Relative harmonic suppressor
- IGBT chopper plasma DC power supply with high power factor converter
- SVG 300kVar
- I-AVR 2500kVA

Power converter equipment with the latest in digital control system technology
